Requirements

macOS Requirements

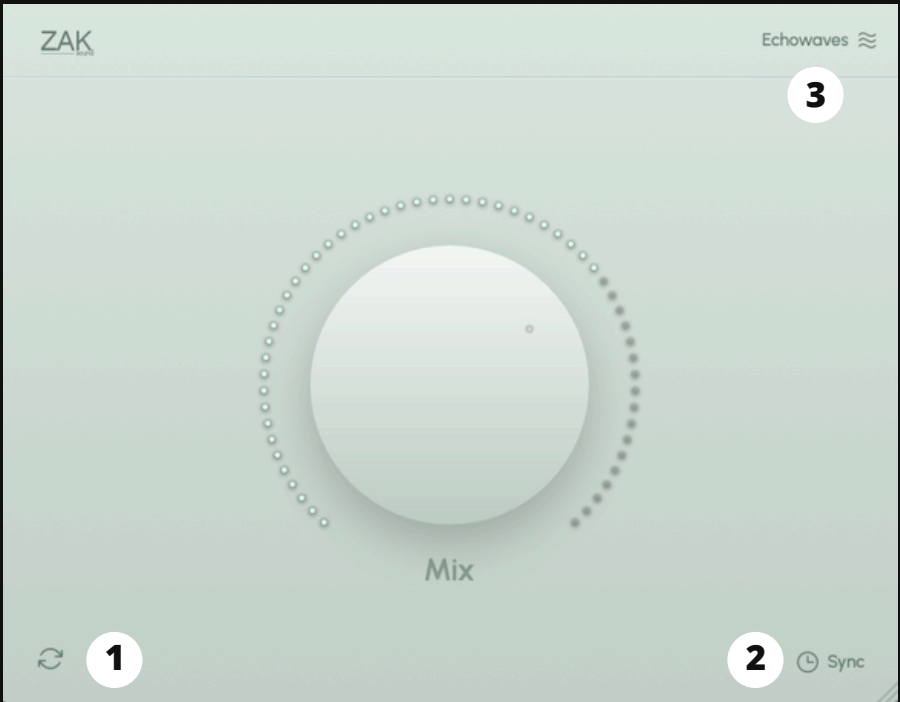

- RAM: 4GB
- macOS 10.11 or higher
- Intel & Native Apple Silicon

Windows Requirements

- RAM: 4GB
- Windows 7 or higher

Linux Requirements

- RAM: 4GB
- Ubuntu 22.04 or higher

1. Random Button

Intelligently generates a new delay setting with every press.

2. Sync vs. Free Mode

Use Sync mode to synchronize the delay with your DAW's BPM. Switch to Free mode to manually set a delay anywhere between 1 and 1000ms.

3. Save echowaves

Click the "Echowaves" logo to open the preset management panel. If you discover a randomized setting you like, you can save it here.

Credits

Echowaves is built using Faust (Functional Audio Stream) technology.
The core DSP engine includes code based on the echo1s function by
GRAMME (© 2006), used under the BSD License.

Additional DSP development and intelligent randomization logic by
ZAK Sound.
